Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11,19-23, drawn to an ordering apparatus, classified in class 709, subclass 238.
- II. Claim 24, drawn to an inventory device, classified in class 705, subclass 28.

The inventions are independent or distinct, each from the other because:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination II has separate utility such as a calculation unit can be otherwise used as an expiration period device for an online auction. See MPEP § 806.05(d).

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not

Art Unit: 3627

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.
